Dear Graduate Recruitment Team at Kerry,

I am writing to express my keen interest in the Kerry Graduate Engineering Programme. As an MEng Computer Engineering student at Queen's University Belfast, on track for a strong degree classification, I have always noted Kerry's transformation into a global leader in sustainable nutrition and food science with great admiration. I would be eager to apply my vast technical background in smart embedded systems, energy efficiency, and operational leadership to solve real-world challenges across Kerry's European engineering network.

Kerry's purpose of *Inspiring Food, Nourishing Life* demands scalable, highly efficient, and innovative engineering solutions. Throughout my Master's degree, I have applied my knowledge of system optimization and resource efficiency. My Final Year Project investigates intermittent computing and power-conscious sensor design. Clever programming and circuit design techniques are used to minimize energy draw, which I understand is highly important for integrating technology into food, beverage, biotechnology, pharma and proactive health.

Beyond academic technicality, my industry experience at Citi taught me the importance of code reliability, and cross-functional collaboration. Demonstrating strong initiative, I voluntarily assumed Quality Assurance duties for adjacent engineering teams to ensure faultless and timely feature deliveries. Complementing this, my role as Duty Manager at Piccolo Kitchen developed my front-line team management, communication, and decision-making skills under high pressure, qualities that I know will not go unnoticed at a firm such as yourselves.

The rotational structure across European locations aligns perfectly with my professional drive and personal desire to broaden my horizons and integrate in another country. Although I am open to relocating to any of the listed countries, having achieved CEFR B2 proficiency in Spanish and regularly competing in international endurance events such as the Barcelona and Murcia marathons, I believe I am an ideal candidate for your innovation centre in Spain.

I would welcome the opportunity to discuss how my engineering foundation, leadership drive, and international mindset can contribute to Kerry's strategic goals.

Thank you for your time and consideration.

Eoin Boyle
